SOLBERG® FOAM PUMP PROPORTIONER

FEATURES

- **Bronze and stainless steel material construction for performance and durability**
- **Fresh, sea and brackish water compatible**
- **Horizontal or vertical mounted position**

DESCRIPTION

The SOLBERG® Foam Pump Proportioner is a foam solution proportioning device, designed to accurately proportion the foam concentrate into the water stream at both high and low system flow rates. The SOLBERG Foam Pump Proportioner is designed as an integral component of the SOLBERG foam pump proportioning system.

APPLICATION

The SOLBERG Foam Pump Proportioner is designed for open and closed-head foam/water sprinkler systems, foam monitor systems, and other SOLBERG foam discharge devices.

The primary applications for the SOLBERG Foam Pump Proportioner include closed-head foam/water sprinkler systems, protecting risks such as flammable and combustible liquid storage rooms, chemical processing, loading racks, aircraft hangars, and tank farm protection systems using foam chambers.

SPECIFICATIONS

The SOLBERG Foam Pump Proportioner is intended for use with SOLBERG foam concentrates (including ARCTIC 3% AFFF, ARCTIC 3x3 ATC), when used as an integral component of a SOLBERG foam pump proportioning system.

The SOLBERG Foam Pump Proportioner is designed to be installed as a between-the-flange proportioner, in sizes ranging from 2.0" (50 mm) up to and including 10.0" (250 mm) system piping.

The foam concentrate inlet size varies depending on the foam concentrate flow rate and proportioner size selected.

The Foam Pump Proportioner will accurately proportion foam concentrate at flow rates between 30 gpm (110 lpm) up to 6,340 gpm (24000 lpm) for SOLBERG foam concentrates^[1].

The SOLBERG Foam Pump Proportioner is manufactured using a bronze body and bronze pressure balancing valve for corrosion resistance. The SOLBERG Foam Pump Proportioner is to be installed with a minimum of 5 pipe diameters (30.0" (762 mm)) of straight pipe both upstream and downstream of the proportioner. The proportioner body is cast with a directional flow arrow on the proportioner body indicating the proper orientation of installation.

^[1] The unit will operate with higher flows if the foam system can accept a higher pressure loss.

SOLBERG® FOAM RATIO CONTROLLER (Between Flange)

FEATURES

- Compatible with all type foam concentrates
- Fresh or saltwater use
- Proportions at 1%, 3% or 6%
- Vertical or horizontal position for installation versatility
- Bronze construction for durability and performance

DESCRIPTION

SOLBERG® Ratio Controllers are modified venturi devices designed to meter the correct amount of foam concentrate into a water stream over a specified range of flow and pressure rates with minimal pressure loss. The ratio controller consists of three components: the body with water inlet, metering orifice located in the foam concentrate inlet, and throat (nozzle) located downstream from the water inlet. The ratio controller is manufactured in four sizes 3.0", 4.0", 6.0" and 8.0" (76 mm, 102 mm, 152 mm, 203 mm).

Application

SOLBERG Ratio Controllers are commonly used in bladder tank systems, balanced or inline balanced* pressure proportioning systems for aircraft hangars, loading racks, tank farms, and foam-water sprinkler systems.

Specifications

The SOLBERG Ratio Controller is designed for installation between two Class 150 flanges of the same nominal size as the ratio controller. The components are constructed of ASTM 85-5-5-5 bronze and the inlet is tapered and machined to a smooth

finish to maximize water stream efficiency. The inlet nozzle and metering orifice are secured by a stainless steel retaining ring. The foam concentrate inlet has a female NPT thread and contains a foam concentrate metering orifice to proportion over the specified flow range without any manual adjustment. The SOLBERG Foam Ratio Controller is to be installed with a minimum of 5 pipe diameters of straight pipe both upstream and downstream of the proportioner.

CERTIFICATIONS

Underwriters Laboratories, Inc. (UL) Listed – Standard 162, FM Approved per Approval Standard 5130.

*Not an FM Approved Configuration

SOLBERG® S-ZF BETWEEN FLANGE INDUCTORS

FEATURES

- Fixed between-flange installation
- High back pressure
- High suction height
- Can be customized to handle various flow rates
- Compatible with alcohol resistant foam concentrates

DESCRIPTION

The SOLBERG S-ZF Inductor is used to mix foam concentrate with water when the foam concentrate is supplied from a tank at atmospheric pressure. The S-ZF inductor can be installed in deluge systems where sprinklers are used, such as aircraft hangars and storage facilities. The inductor(s) are connected to the water line.

APPLICATION

The S-ZF inductor can be installed in all fixed flow systems, especially in areas where deluge nozzles are used such as storage facilities and aircraft hangars.

OPERATION/INSTALLATION

The S-ZF is installed inside the pipe work between two flanges. The S-ZF works using the venturi principle (i.e., foam concentrate is sucked into the inductor without using a foam pump). Both low and high viscosity foam concentrates can be used in conjunction with the S-ZF. Depending on the requested flow, pressure, foam concentrate type and proportioning ratio, the inductor will be equipped with the exact orifice at the entry of the foam pipe.

Induction performance and suction height can be adjusted up to a physical limit of approximately 26.0' (8.0 m). To ensure correct proportioning over the designed flow range of the inductor, the minimum water inlet pressure shall be 58 psi (4 bar) during operation of the system.

Note: review inductor dimension tables for information on the minimum recommended length of straight pipe required upstream and downstream from the controller.

OPTIONAL

SOLBERG S-ZF inductor can be customized to handle a variety of flow rates as well as high viscous alcohol resistant concentrates.

INDUCTORS WITHOUT BALANCING VALVE

To obtain a 34% pressure drop over the inductor and get the inductors proper function, the system after the inductor shall have a K-factor which is 27% higher than the K-factor of the inductor when using a 3% foam concentrate and 30.5 % higher when using a 6% foam concentrate. If the K-factor, on the system after the inductor, is less than 1.22 x the K-factor of the inductor, the suction ceases completely.

SOLBERG® S-ZF BETWEEN FLANGE INDUCTORS

ORIFICE CALCULATION

$$\frac{(Q_v + Q_s) \sqrt{H}}{Q_v \sqrt{0.66 H}} = A$$

Qs = 1 %, 3% or 6%

Qv = Water flow

Qs = Foam Concentrate flow

H = Water pressure before the inductor

A = Orifice diameter

ORDER REQUIREMENTS

Each inductor is factory calibrated to match the specific system requirements. To ensure that the correct performance is achieved, the following parameters must be defined at time of order placement:

- Inlet pressure
- Total system flow
- Foam type & viscosity
- Mixing percentage
- Suction height
- Horizontal suction pipe length

THREADED PROPORTIONER

FEATURES

- **Bronze material construction for performance and durability**
- **Fresh or saltwater compatible**
- **Horizontal or vertical mounted position**

DESCRIPTION

Perimeter Solutions Threaded Proportioners are modified venturi ratio controllers that accurately mix and meter

foam concentrate into fire-water streams. Each proportioner consists of the following components: body, inlet nozzle, and metering orifice constructed out of ASTM 85-5-5-5 bronze material. The proportioner is designed with a male NPT threaded inlet and a male threaded outlet in sizes of 2.0" and 2.5", with the flow direction arrow clearly marked. During operation, water flows through the modified venturi to create an area of lower pressure which is directly effected by the water velocity as it flows through the ratio controller.

APPLICATION

Typical high-hazard, high-risk applications including flammable liquid storage tanks, loading racks, aircraft hangars, heliports and anywhere flammable liquids are used, stored, processed, or transported.

You can count on Perimeter Solutions Threaded Proportioners to correctly proportion and properly handle the mixing of SOLBERG foam concentrates into a water stream with little pressure loss. SOLBERG Threaded Proportioners are UL listed when used with Solberg foam concentrates and can be used with bladder tank systems and inline balanced pressure proportioning systems.

SPECIFICATIONS

Each Perimeter Solutions Threaded Proportioners body and inlet nozzle is made of bronze with the inlet nozzle and orifice being secured by a stainless retaining ring. The inlet and outlet of the proportioner body is to be a male NPT with clear markings indicating flow direction and concentrate type. The inlet nozzle is designed with a rounded inlet and a smooth machined finish to ensure minimum stream constriction and maximum velocity. The metering orifice is designed to the proper diameter for the specific foam concentrate type.

CERTIFICATIONS

Underwriters Laboratories, Inc. (UL) Listed - Standard 162, FM Approved per Approval Standard 5130 (see FM Approval Guide).

- Fresh, salt and brackish water compatible
- Horizontal or vertical mounted position

DESCRIPTION

The Perimeter Solutions Variable Range Proportioner is a low foam solution proportioning device, designed to accurately proportion the foam concentrate into the water stream at both high and low system flow rates. The Perimeter Solutions Variable Range Proportioner is designed as an integral component of the Perimeter Solutions Bladder Tank proportioning system, to be used with SOLBERG foam concentrates in foam-water systems.

The Perimeter Solutions Variable Range Proportioner complies with NFPA 30, the Flammable and Combustible Liquids Code, Paragraph 16.5.1.6.2, which states that foam/water sprinkler systems are to provide foam solution to operating sprinklers with 4 sprinklers flowing. The Perimeter Solutions Variable Range Proportioner was designed to meet this Code requirement.

APPLICATION

The Perimeter Solutions Variable Range Proportioner is designed for closed-head foam-water sprinkler systems where proportioning of foam concentrate will begin at low flow rates, but as additional sprinklers operate, the proportioner will automatically adjust for the changes in system flow rates and

maintain accurate foam concentrate proportioning. Considering that the fire data shows that only 4 to 5 sprinklers will be necessary to control the flammable liquid fire risks, the Perimeter Solutions Variable Range Proportioner is the perfect solution for low system flow proportioning.

The primary applications for the Perimeter Solutions Variable Range Proportioner include closed-head foam/water sprinkler systems, protecting risks such as flammable and combustible liquid storage rooms, chemical processing, loading racks, aircraft hangars, and tank farm protection systems using foam chambers.

SPECIFICATIONS

The Perimeter Solutions Variable Range Proportioner is certified for use with SOLBERG RE-HEALING RF3, 3%, ARCTIC 3% AFFF and ARCTIC 3x3 ATC* foam concentrates, when used as an integral component of a SOLBERG bladder tank proportioning system. The Perimeter Solutions Variable Range Proportioner is designed to be installed as a between-the-flange proportioner, in standard 6.0" (152 mm) system piping. The foam concentrate inlet is 2.0" (50 mm) NPT female pipe size.

VARIABLE RANGE PROPORTIONER

The proportioner will accurately proportion foam concentrate at flow rates between 80 to 2,100 gpm (302 to 7949 lpm) for 3% AFFF concentrate, between 80 to 1,698 gpm (302 to 6428 lpm) for 3x3 ATC concentrate and between 108-1700 gpm (405-6435 lpm) for RE-HEALING RF3, 3% foam concentrate.

The Perimeter Solutions Variable Range Proportioner is manufactured using a bronze body and cone shaped piston, stainless steel spring, and stainless steel foam metering orifice. The Perimeter Solutions Variable Range Proportioner is to be installed with a minimum of 5 pipe diameters (30.0" (762 mm)) of straight pipe both upstream and downstream of the proportioner. The proportioner body is cast with a directional flow arrow on the proportioner body indicating the proper orientation of installation.

The Perimeter Solutions Variable Range Proportioner operation in closed-head sprinkler systems is as follows:

Under static, no flow conditions in the water supply piping, the water and foam concentrate pressures are equal. During a fire situation as sprinklers begin to open, the foam concentrate is injected into the water supply through the foam concentrate metering orifice at the proper listed solution rate.

As more sprinklers begin to operate, the change in foam-water solution demand is automatically adjusted for by the Perimeter Solutions Variable Range Proportioner, by injecting a carefully calibrated increased quantity of foam concentrate into the piping.

CERTIFICATIONS

Underwriters Laboratories, Inc. (UL) Listed - Standard 162, FM Approved per Approval Standard 5130 with RE-HEALING RF3, 3% and ARCTIC 3x3 ATC Foam Concentrates.

VARIABLE RANGE PUMP PROPORTIONER

FEATURES

- **Bronze and stainless steel material construction for performance and durability**
- **Fresh, sea and brackish water compatible**
- **Horizontal or vertical mounted position**

DESCRIPTION

The Perimeter Solutions Variable Range Pump Proportioner is a foam solution proportioning device, designed to accurately proportion the foam concentrate into the water stream at both high and low system flow rates. The Perimeter Solutions Variable Range Pump Proportioner is designed as an integral component of the SOLBERG foam pump proportioning system.

The Perimeter Solutions Variable Range Pump Proportioner complies with NFPA 30, the Flammable and Combustible Liquids Code, Paragraph 16.5.1.6.2, which states that foam/water sprinkler systems are to provide foam solution to operating sprinklers with 4 sprinklers flowing. The Perimeter Solutions Variable Range Pump Proportioner meets this Code requirement.

APPLICATION

The Perimeter Solutions Variable Range Pump Proportioner is designed for systems where proportioning of foam concentrate will begin at low flow rates, but as additional sprinklers operate, the proportioner will automatically adjust for the changes in system flow rates and maintain accurate foam concentrate proportioning. Considering that the fire data shows that only 4 to 5 sprinklers will be necessary to control the flammable liquid fire risks, the Perimeter Solutions Variable Pump Range Proportioner is the perfect solution for low system flow proportioning.

The primary applications for the Perimeter Solutions Variable Range Pump Proportioner include closed-head foam/water sprinkler systems, protecting risks such as flammable and combustible liquid storage rooms, chemical processing, loading racks, aircraft hangars, and tank farm protection systems using foam chambers.

SPECIFICATIONS

The Perimeter Solutions Variable Range Pump Proportioner is acceptable for use with Perimeter Solutions foam concentrates, when used as an integral component of a SOLBERG foam pump proportioning system. The Perimeter Solutions Variable Range Pump Proportioner is designed to be installed as a between-the-flange proportioner, in standard 6.0" (152 mm) or 8.0" (203 mm) system piping. The foam concentrate inlet is 2.0" (51 mm) or 2.5" (64 mm) BSP female pipe size depending on the proportioner size selected.

The proportioner will accurately proportion foam concentrate at flow rates between 18 to 1,850 gpm (70 to 7000 lpm) for 6.0" (152 mm), and between 40 to 3,963 gpm (150 to 15000 lpm) for 8.0" (203 mm) sizes¹.

¹ The unit will operate with higher flows if the foam system can accept a higher pressure loss.

VARIABLE RANGE PUMP PROPORTIONER

The Perimeter Solutions Variable Range Pump Proportioner is manufactured using a bronze body and cone shaped piston, stainless steel spring, and stainless steel foam metering orifice. The Perimeter Solutions Variable Range Pump Proportioner is to be installed with a minimum of 5 pipe diameters (30.0" (762 mm)) of straight pipe both upstream and downstream of the proportioner. The proportioner body is cast with a directional flow arrow on the proportioner body indicating the proper orientation of installation.

The Perimeter Solutions Variable Range Pump Proportioner operation in closed-head sprinkler systems is as follows:

Under static, no flow conditions in the water supply piping, the water and foam concentrate pressures are equal. During a fire situation as sprinklers begin to open, the foam concentrate is injected into the water supply through the foam concentrate metering orifice at the proper listed solution rate. As more sprinklers begin to operate, the change in foam-water solution demand is automatically adjusted for by the SOLBERG Variable Range Pump Proportioner, by injecting a carefully calibrated increased quantity of foam concentrate into the piping.
